CANNABUSINESS ERP PRODUCT DEEP-DIVE

TAKE YOUR CANNABIS BUSINESS TO THE NEXT LEVEL

sage Platinum Reseller

canna BUSINESS ERP

CannaBusiness ERP

Built to help cultivators and processors streamline operational efficiency and manage business growth.

Streamline Operations

CannaBusiness ERP helps cultivators and processors optimize their operations, improve inventory management, reduce processing errors from a single system.

With built-in dashboards and customizable reports that provide real-time operational insights, business leaders can make better, quicker decisions based on the health of their organizations. CannaBusiness ERP's costing functionality provides complete visibility into costs all along the way for more accurate, streamlined accounting and financial processes.

Support Compliance

CannaBusiness ERP helps businesses comply with demanding international, federal and state-specific requirements. It supports GMP standards, as well as US state and Health Canada reporting (Metrc, BioTrack, CTLS) to ensure that growers and processors can operate in single or multiple regions with limited disruption.

To adhere to recall management regulations, CannaBusiness ERP allows users to search for products and lots associated with recalled material, freeze existing inventory and create call tasks to be carried out by customer service teams.

Manage Growth

CannaBusiness ERP is built to help cannabis companies scale their operations as they grow. To account for increasing sales and administrative tasks, CannaBusiness ERP provides leaders with the tools needed to make important changes and decisions based on business growth trajectories.

CannaBusiness ERP helps cannabis companies grow their businesses with functionality that automates time-consuming processes, improves operational visibility and easily handles increases in transaction volumes, workloads and data.

You need more than single-purpose software to grow your business with confidence.

AS THE CANNABIS INDUSTRY enters a stage of maturation, attention is shifting from establishing market share and spending money on product development towards ensuring operational efficiency and long-term success. As part of this phase of maturity, cannabis companies will require sophisticated tools to remain competitive, better manage cash flow, keep production on track and achieve profitability.

Accounting, operations-only and seed-to-sale solutions cannot handle the financial, operational and regulatory complexities that cannabis companies face. Instead, flexible and scalable business management software like an ERP solution can help cultivators and processors manage industry complexities and keep up with a rapidly evolving market.

Integrated with Sage X3 and configured by NexTec industry experts, CannaBusiness ERP:

- ✓ Streamlines financial and operational management
- ✓ Supports quality and safety (GMP, US State/Health Canada reporting)
- ✓ Improves cultivation and production management
- ✓ Increases inventory accuracy and provides insight to actual costs

Features

Operations and Finance

Track key metrics such as strain, costs and labor using dashboards and audit reports

Keep track of costs to better understand which product lines are most profitable and adjust accordingly

Manage multi-company finance and operations from a single system

Cultivation and Harvest

Track clone propagation and get visibility into replanting, trellising and more

Account for inventory waste and capture inventory adjustments for regulatory reporting

Manage fertigation activities such as zone tracking, tank fill and cleanout management, comingling traceability and costing

Processing Edibles and Infused Products

Automate production sequencing to minimize setup, cleanouts and non-production activity

Improve operational efficiency and reduce production waste

Manage cannabis and food-specific requirements with functionality that merges both industries

Quality and Compliance

Adhere to regulations and support GMP standards and US State/Health Canada reporting

Mitigate recall risk and ensure safety with robust product recall management features

Leverage quality management and control functionality to optimize compliance

Inventory and Distribution

Use accurate inventory data to make better, faster decisions about your business

Keep track of inventory movement with advanced lot traceability functionality

Manage customers, suppliers and alternate suppliers from a single purpose-built platform

How It Works

Trace from seed or clone through harvest to sale

Gain control and visibility throughout the cultivation process

Support compliance and regulation reporting with comprehensive material tracking

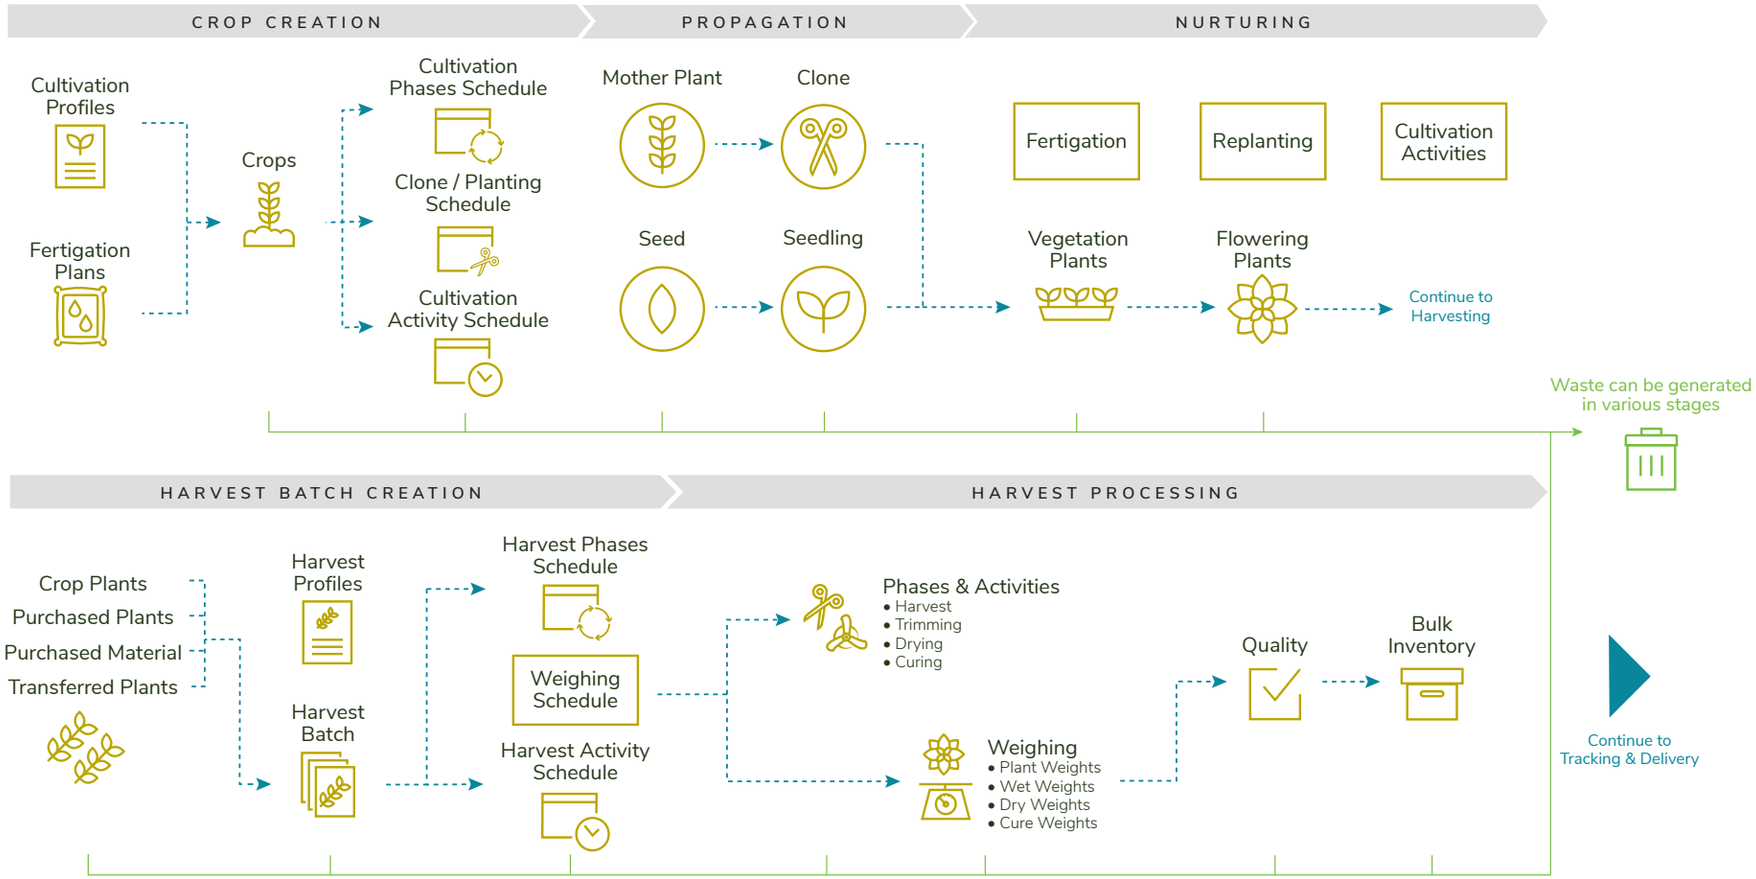
Account for complete costing breakdowns including daily cost allocations, shortages and consumption

Manage every step of the cultivation process, including cultivation, harvest, waste, fertigation and more

Cultivation and Harvest Management

CannaBusiness ERP for cultivation and extraction offers a flexible, personalized solution to help simplify processes while maximizing yields and profitability.

Cultivation and Harvest



Tracking & Delivery

How It Works

Trace from receiving through to delivery

Gain control and visibility throughout the production process

Support compliance and regulation reporting with comprehensive quality and recall management

Manage and analyze production costs

Analyze critical data using dashboards, KPI and alert reporting

Processing Edibles and Infused Products

CannaBusiness ERP for processing merges cannabis-specific features with food and beverage-specific ones to help users gain control and visibility throughout the production process and support their compliance efforts.
